

CVWO assignment

Basic use cases:

1. Users are able to create new tasks.
2. Users are able to read the details of every single task.
3. Users are able to update each task's description, deadline etc.
4. Users are able to delete outdated tasks and tasks that have been finished already.
5. Users are able to organize tasks of different type into different groups. Users can therefore search through them much easier.
6. Users are able to set the tasks with different priority levels.

Execution plan:

Backend: ruby on rails

Frontend: react

Use PostgreSQL as database

Version my application using github
